

Re-visioning Recycling by October 31st, 2021

The PRWMC is making positive and impactful changes for our membership residents to streamline the way we service recyclable materials. Some of these changes are as follows:

We are transitioning from multi stream to single stream recycling to align with other recyclers. This means “No More Sorting” or all your recycling can be co-mingled into one clear/blue bag.

- One large bin for all eligible recyclable materials will be available at your transfer stations and the landfill.
- Blue/clear bag to be used for all eligible recyclable materials. This is important so we can see that it is recyclable material.
- Styrofoam now accepted and to be placed inside blue/clear bags
- Cardboard to be flattened and folded and placed in or with the blue/clear bags. We prefer it in the bag but also understand that cardboard can be large pieces.
- Appliances now accepted year-round at no cost to NSC residents. This enables us to eliminate the Spring and Fall Cleanups for more consistent management.
- Bin for the collection of cardboard will be removed as it's no longer necessary
- Glass collection to be discontinued. Unfortunately, there is no market for this product for now. PRWMC constantly follow changing markets and we hope a new market develops soon.
